

SCOOTERBIKE

ENGLISH

ScooterBike represents a new class of vehicle for modern mobility.

The ScooterBike design is in every way practical and stylish. Elegant, flowing lines lend this bike its unique, harmonious form.

The ride is comfortable and exciting, like we think cycling should be.

The USED philosophy:
The only good product is a product that is being USED.
Everything else is a waste of resources, time and money. We want to sell products that people need.
"If you don't need it, don't buy it."
That's our message.

ScooterBike - Simple - Reliable - Practical - Stylish
ScooterBike - Einfach - Verlässlich - Praktisch - Elegant

The ScooterBike represents a new class of vehicle for city mobility. The ScooterBike is designed for safety and comfort. Its low weight, high riding comfort and functionality combined with revolutionary new frame geometry make the ScooterBike reliable, simple, practical and healthy. Elegant, flowing lines lend this bike its unique, harmonious form.

The comfortable seat with a broad-surfaced saddle and back support takes 100% of your body weight, which removes pressure and relieves tension in your back, bottom, neck, shoulders and wrists. This feature is supplemented by the suspension shock immediately under the seat.

From the relaxed, ergonomic sitting position it is easy to keep a close watch on the traffic situation. To stop, all you have to do is take one foot from the pedal and set it on the ground from a seated position.

The ScooterBike is the place where design meets function. The health aspect and the design features make the ScooterBike attractive to all age groups. The many options available mean that everyone can configure his own personal ScooterBike.

ScooterBike is easy to learn and hard to forget. You will not want to miss this comfort again!

ScooterTrike - Simple - Reliable - Practical - Stylish - Helpful
ScooterTrike - Einfach - Verlässlich - Praktisch - Elegant - Hilfreich

The ScooterTrike rider has special needs. We have listened to these needs and the result is an ergonomic frame, low-entry capability and a comfortable, safe seating position on three wheels.

The ScooterTrike can be adapted to fit the needs of many different user types. We can fit special components for handicapped people to allow freedom of movement. It can also be fitted with an electric power assist system.

The low centre of gravity makes the ScooterTrike very stable while cornering and the wheel base of 74cm means that this trike will pass through all standard door sizes.

The comfortable seat with a broad-surfaced saddle and back support takes 100% of your body weight, which removes pressure and relieves tension in your back, bottom, neck, shoulders and wrists. This feature is supplemented by the suspension shock immediately under the seat.

The use of high quality raw materials and components make this Trike light and agile in motion.

ScooterBike - Simple - Reliable - Practical - Stylish - Electric
ScooterBike - Einfach - Verlässlich - Praktisch - Elegant - Elektrisch

The HYBRID concept is an intelligent Energy-Management-System for flexible, comfortable mobility and lasting fitness. With this product you can move fast, further and easier. It is the perfect system for daily commuting and extends the mobility range for people with special needs.

With the HYBRID system it is possible to combine mobility with physical well-being, but with less effort. The ride to work can be exercise without the sweat. For people with special needs, who are unable to ride a normal bike, the ScooterTrike HYBRID can provide a healthy solution to the transport problem.

Hybrid - Pedelec

ScooterBike HYBRID: See ScooterBike for information and options. The Pedelec System can be delivered with either a NiMH or a Lithium-Ion battery.

ScooterTrike HYBRID: See ScooterTrike for information and options. The ScooterTrike HYBRID has a start-up throttle for the first 6 km/h.
